

Super Polish Step by Step

LED cure

Proper preparation is a key to long wear time. Please read the below steps carefully and follow it thoroughly. Any oil spots or residues left on the nail will cause Super Polish to peel or lift soon.

Prepare

- 1 Remove any nail polish and cleanse your nails to remove any oils or moisture. Use cotton pad soaked in **Super Polish Remover** and carefully rub the nail surface to cleanse it. Make sure you cleanse entire nail surface, especially the cuticle area and at the sides of the nail.
- 2 Use grey side of the **Miss Rhino** nail file to slightly buff the nail surface. Again, make sure you buff the entire surface with special attention to the cuticle area and the sides.
- 3 To remove dust, only the cotton pad soaked in **Super Polish Remover** can be used. Avoid touching nail surface with your fingers since they are oily and will transfer oils back to the nail plate.

Color

- 1 Start with the left hand and apply one coat of **Super Polish** same way as you would apply any regular nail polish. Try to apply in a thin layer as this will increase wear time.
- 2 Apply 4 fingers at a time and cure in the **Super Polish LED lamp** for 30 seconds. Super Polish LED lamp has a timer and will automatically turn off once curing completes. Please note, surface will remain sticky and this is completely normal – do not touch it.
- 3 Continue application on the thumb of the right hand, and cure in the lamp.
- 4 Once you apply all 5 fingers, you can optionally do a second coat if desired. If you however are happy with one coat, you can move to the next step.
- 5 After you finish application on the right hand, use soaked cotton pad in the **Super Polish Remover** and rub the surface of the nail to cleanse the sticky layer. This will leave nails shiny and dry.
- 6 Now continue same steps with the right hand. Once finished, you are done and now can enjoy Super Polish manicure.

Important Tips

Do not use regular nail polish remover for nail preparation. Regular nail polish removers contain water and oils, which are left on the nail surface and are reasons to liftings and chipping. Only use **Super Polish Remover**, its formula contains 97% of pure solvents to guarantee perfect result.

Do not touch nail surface with your fingertips after preparation. While your fingers are oily, the oil will get to the nail plate and affect wear time. If it thought accidentally happens you touch the nail plate, don't worry — simply soak the cotton pad in **Super Polish Remover** and rub the nail surface to cleanse again. Now your nails are ready to apply **Super Polish**.

UV lamps can not be used to cure Super Polish manicure. UV lamps are different to LED lamps and can potentially affect surface shine and wear time. Minimum power of LED required is 6 W.

Try to apply **Super Polish** in a thin layer. Thin layer will give you maximum wear time. It is fine to apply two coats for more vivid color.

Removal

- 1 Buff off the top coat using the White side of **Miss Rhino** nail file before soaking.
- 2 Use **Remover Foils** and **Super Polish Remover** to easily remove Super Polish.
- 3 Soak the cotton pad on the foil generously with **Super Polish Remover**.
- 4 Position the cotton pad precisely against the nail making sure it covers the entire surface of the nail plate. It is important the cotton pad has direct contact to the Super Polish coat.
- 5 Starting from the sides, wrap the foil around the finger tightly and finish with bending the edge of the foil to seal the finger completely.
- 6 Apply on all 10 nails and let it soak for 10 minutes.
- 7 Remove the foil and use **Orangewood Stick** to gently remove Super Polish that has lifted from the nail.
- 8 If you encounter difficulty to remove the Super Polish, put the foil back and soak for another 3-5 minutes. It is possible removal takes more time in cold environment or if nails are thin or damaged.
- 9 Once all nails are clean, finish with lightly buffing the nail using the grey side of the **Miss Rhino** file.
- 10 Use **Kinetics Cuticle Oil** to moisturize nails and cuticles to restore its natural moisture levels. Cuticle oil will nourish cuticles and strengthen the nail plate.
